- Design, implement and maintain network systems for multiplayer games.
 - Lead and technically supervise a team of engineers to integrate network functionalities into the game engine.
 - Responsible for network performance to ensure low latency, low bandwidth and high reliability.
 - Diagnose and resolve network-related issues during development and post-launch.
 - Work closely with gameplay and backend teams to ensure seamless integration of network features.
 - Keep abreast of the latest network technologies and best practices and apply them within the team.
-
- Significant experience in the application of networking principles in one or more AAA multiplayer games.
 - Experience in designing large-scale system architectures.
 - Ability to design and implement scalable multiplayer architectures.
 - Experience in high-performance programming, multithreading and memory management.
 - Expert knowledge of low-level network concepts and high-level multiplayer gaming systems.
 - Solid understanding of network protocols, data transmission and synchronization techniques.
 - Excellent collaboration and communication skills.
