As an Online Programmer at Ubisoft Montreal, you will help build, improve, and support the online systems that power multiplayer game features. As an Online Programmer, you will play a key role in designing scalable, resilient, and high-performing online services that support live game experiences.

You will contribute to the architecture and implementation of server-side systems, ensuring stability, maintainability, and long-term reliability for players around the world.

What you'll do

- Design and deploy server-side services supporting online gameplay systems.
- Develop and improve application programming interfaces and backend components.
- Implement and maintain continuous integration and deployment pipelines.
- Analyze online and network requirements to propose effective technical solutions.
- Write clean, efficient, and scalable code.
- Validate new systems to ensure consistency with existing architectures.
- Optimize current systems to maintain performance and stability.
- Document online features to support knowledge sharing.
- Fix network-related issues in collaboration with quality control teams.
- Support online systems in live production environments.

What you bring to the team

- A degree in Computer Science or Software Engineering.
- At least 5 years of experience in programming.
- Strong skills in online or network programming.
- Proficiency with programming languages such as Go, C++, or Python.
- Hands-on experience with server-side development.
- Knowledge of network protocols and distributed systems.
- Familiarity with automation, deployment tools, and infrastructure concepts.
- Strong problem-solving and analytical abilities.
- Ability to document technical solutions clearly.
- Comfort working in collaborative, cross-disciplinary teams.
- Autonomy, adaptability, and attention to detail.
