As a **Cloud Developer** at Ubisoft **Montreal**, you will join the Infrastructure & Platform team. This team builds and operates Ubisoft's internal IT platform, a centralized environment that provides development teams with cloud and infrastructure services.

In your role as a **Cloud Developer**, you will focus primarily on building features and operating our Database as a Service offering. You will work on a platform built on modern infrastructure, with Kubernetes at its core, supporting scalable and reliable services used across the organization.

What you'll do

- Design and develop **microservices, web services, and application programming interfaces** for platform services
- Build and maintain features for **Database as a Service** solutions used by internal teams
- Write **clean, maintainable code** aligned with modern architecture and best practices
- Contribute to **technical architecture and design decisions** in collaboration with the team
- Produce clear and structured **technical documentation** for supported services
- Partner with **operations teams** to ensure applications run reliably in all environments
- Identify, analyze, and resolve **system and performance issues**
- Improve **continuous integration and deployment pipelines**, testing practices, and development tools

What you bring to the team

- Proficiency in one or more **compiled programming languages**, such as **Go, C++, or C#**
- Strong knowledge of **container and orchestration technologies**, including **Docker** and **Kubernetes**
- Ability to design and integrate **RESTful APIs** and **gRPC services**
- Hands-on experience with **continuous integration and continuous deployment** tools such as **GitLab CI, ArgoCD, or Spinnaker**
- Familiarity with **infrastructure as code** and automation tools like **Terraform** and **Ansible**
- Experience developing **large-scale software systems** in production environments
- Strong collaboration skills and comfort working in **cross-functional teams**
- Curiosity and motivation to **stay current with cloud and platform technologies**

What to send our way

- Your CV highlighting relevant skills and experiences
- Links to code repositories, technical projects, or platform-related work samples
