As a Network Administrator at Ubisoft Montréal, you will help maintain and improve the infrastructure used by our global network team. You will also resolve complex issues raised by our partners and support other administrators.

What you'll do

- Install and maintain **network equipment**, including switches, routers, firewalls and load balancers
- Deploy and maintain **private network links** and dedicated peering connections
- Assess new requirements and technical designs, and help define **standards, guidelines and metrics**
- Increase the use of **automation** to improve consistency and efficiency
- Monitor and troubleshoot **network infrastructure and services**, including complex issues raised by partners
- Apply **network security** policies and procedures
- Manage **network capacity**, improve performance and contribute to expansion plans for networks and systems
- Maintain **network hardware and software documentation**
- Respond to **user inquiries and service requests**
- Mentor newer administrators and serve as a **technical resource** for the team

What you bring to the team

- Extensive experience in **network administration**
- Expertise in **routing**, including Border Gateway Protocol (BGP) and Open Shortest Path First (OSPF)
- Expertise in **switching**, including virtual local area networks (VLANs), Spanning Tree Protocol (STP), EtherChannel, VLAN Trunking Protocol (VTP), and Layer 2 and Layer 3 protocols
- Ability to develop approaches to **complex, unfamiliar network problems**
- Knowledge of **Linux** and cloud networking in Amazon Web Services (AWS) or Azure, an asset
- Experience with **Python, Ansible and automation pipelines**, including continuous integration and continuous delivery (CI/CD), an asset
- Strong **communication skills**, including the ability to explain complex information to people at all levels of management
- **Sound judgment and critical thinking**, with a commitment to flagging governance or priority concerns and handling information with integrity and confidentiality
